SUMMARY

Go developer (backend / DevOps). I have been writing Go since 2024: REST APIs and real-time services on PostgreSQL, Redis and WebSocket. I take projects all the way to deployment: tests, CI/CD on GitHub Actions, Docker and Kubernetes, monitoring with Prometheus and Grafana. Looking for an internship or a Go developer role in Almaty.

SKILLS

Languages	Go, SQL, Bash
Backend	REST, OpenAPI, JWT, WebSocket, pgx, testcontainers-go
Databases	PostgreSQL, Redis
DevOps	Docker, Kubernetes, Helm, GitHub Actions, Nginx, Linux
Monitoring	Prometheus, Grafana, Alertmanager
Quality	unit and integration tests, k6, pprof, golangci-lint
Familiar with	gRPC, RabbitMQ / Kafka, GitLab CI, Loki

PROJECTS & EXPERIENCE

fintracker

backend, pet project, in progress — Jan 2025 — present

Go, PostgreSQL, Redis, Docker, Kubernetes, Helm, GitHub Actions, Prometheus, Grafana · github.com/moraziss/fintracker

- Designed a REST API with a **three-layer architecture** (handler → service → repository): migrations, indexes tuned for analytical queries, OpenAPI specification.
- Implemented **JWT authentication** with refresh-token rotation and bcrypt; balance operations are atomic via database transactions.
- Added **Redis caching and rate limiting** for the analytics endpoints.
- Set up **CI/CD on GitHub Actions** (lint → test → build → deploy) and Prometheus/Grafana monitoring with alerts; ran k6 load tests and pprof profiling.
- Deployed to a VPS (Nginx, HTTPS) and to **Kubernetes via a Helm chart**.

Real-time Chat & Task Manager

fullstack (Go + Flutter), pet project — May 2025 — present

Go, PostgreSQL, WebSocket, Docker, GitHub Actions, Flutter, Riverpod · github.com/moraziss/realtime_chat_app

- Built the messenger backend: **~20 REST endpoints and a real-time WebSocket channel** — rooms, online status, read receipts, files, live task updates; tests for services, handlers and the WebSocket hub.
- Implemented JWT authentication with refresh tokens (rotation, revocation); **found and fixed two IDOR vulnerabilities** in the WebSocket and REST task endpoints.
- Designed the PostgreSQL schema and a shared task manager with two-sided task confirmation.
- Set up CI (GitHub Actions: lint, build, tests with the race detector, dependency scanning) and containerization (Docker, non-root, healthcheck).
- Built a cross-platform Flutter client (Windows / Web / Android) with Riverpod and real-time chat; **60+ tests** and a separate CI pipeline.

EDUCATION & LANGUAGES

Education	Secondary vocational education
English	C1 (Advanced), EF certificate
